Hive Robotics, München

Application: Mechanical Design Engineer, Rugged Electronics Enclosures (m/f/d)

Dear Hiring Team,

I am applying for the Mechanical Design Engineer position for rugged electronics enclosures. I am finishing my PhD in Mechatronics and Robotics at Aalborg University, with an MTech in Mechatronics and a BTech in Mechanical Engineering.

My work is about packaging electronics into mechanical structures that have to hold up in real use. For my PhD I designed a shoulder exoskeleton in SolidWorks and integrated the motor, encoder and force sensors into the frame myself, including mounting, cable routing and access for service. I iterated the parts with 3D printing until they survived testing. The design cut energy use by more than 25% and won the Best Paper Award at IFToMM ISRM 2026. In my Bachelor's I machined and assembled a rehabilitation exoskeleton, so I am at home in the workshop.

I have not yet designed to IP ratings or run thermal, environmental or EMC testing, and I would like to learn this with your team while bringing hands-on design and prototyping from day one.

Thank you for your time. I would be glad to talk.

Kind regards,
Arunabha Majumder
