Harmattan AI, Automation and Industrialisation team, Orly

**Application: Junior Robotics Automation Engineer**

Dear Harmattan AI team,

I am applying for the Junior Robotics Automation Engineer position in Orly. I am finishing my PhD in Mechatronics and Robotics at Aalborg University, with an MTech in Mechatronics and a BTech in Mechanical Engineering. My PhD ends in March.

Most of my work has been hands-on: integrating motors, encoders and force sensors into robotic devices, building test rigs, and tracking down faults until a setup runs reliably. For my PhD I built a shoulder exoskeleton that cut energy use by more than 25% and won the Best Paper Award at IFToMM ISRM 2026, and I validated a force estimate on a 5-bar robot against a reference sensor to within 10%. Testing with 12 people taught me to plan carefully and take safety seriously.

I want to be clear about my gaps. I have not yet programmed PLCs or Siemens TIA Portal, worked with industrial robots such as UR or FANUC, or managed integrators, and I do not speak French yet. These are what I would work hardest to learn alongside your senior engineer. What I bring is a practical, hands-on approach, root-cause thinking and clear technical writing.

Thank you for considering my application.

Kind regards,
Arunabha Majumder
