Hiring Team, R&D
CUBIC-Modulsystem A/S, a Rockwell Automation company
Brønderslev, Denmark

Application: Mechanical Designer – R&D

Dear Hiring Team,

I am applying for the Mechanical Designer position in CUBIC's R&D team in Brønderslev. I hold a B.Tech in Mechanical Engineering and an M.Tech in Mechatronics, and I am finishing my PhD at Aalborg University. For the past three years I have turned concepts and requirements into practical electromechanical designs in Denmark, and I am motivated by seeing designs become real products.

In my PhD, I took a wearable electromechanical product from concept to tested hardware. I owned the SolidWorks 3D models, assemblies and technical drawings, iterated the design on FEA results for stiffness, strength and weight, and built the prototypes hands-on from machined and additively manufactured parts. I then planned and ran testing and verification on custom test rigs. The design cut energy consumption by more than 25% and won the Best Paper Award at IFToMM ISRM 2026.

I work in a structured way and keep manufacturability and cost in mind. On a 5-bar parallel robot, I removed an external force/torque sensor by estimating force from the actuator itself, which reduced cost, mass and part count. I validate my models against physical tests before committing to fabrication, and I produce the drawings used to build and assemble each part.

My projects combine mechanical design, electronics and control, so I am used to working closely with engineers from other disciplines. I have worked in Denmark and India with English as my working language, and I am a Certified SolidWorks Associate. I am based in Aalborg, close to Brønderslev.

My CAD experience is in SolidWorks and Fusion 360 rather than Creo, and my hands-on manufacturing so far is mainly with machined and additively manufactured parts. Creo, sheet metal and the Engineering Change process are where I want to grow next, and CUBIC's switchboard systems are the right place to do it.

I would welcome the opportunity to discuss how I can contribute to your team. References are available upon request.

Kind regards,
Arunabha Majumder
