Cell Labs, Berlin, Germany

Application: Hardware / Industrial Designer – Humanoid Systems

Dear Cell Labs Team,

I am applying to help shape the hardware of your humanoids. I am a mechanical and robotics engineer finishing my PhD at Aalborg University, and a trained visual artist with a Diploma in Fine Arts (Painting), so I care both about how a robot works and how it looks and feels to the people around it.

My PhD robot is worn directly on the human body: a hybrid-actuated shoulder exoskeleton (Best Paper Award, IFToMM ISRM 2026). That meant designing for physical contact with people from the first sketch, packaging the motor, encoder, sensors and cabling into a compact assembly, and testing it with participants. I build prototypes fast through 3D printing and machining, see what holds up, and iterate in SolidWorks and Fusion 360 until it works.

My background is in engineering rather than industrial design, and I have not yet led surfacing, CMF or supplier work. What I would bring is a designer who understands the internals, safety and physical interaction of the robot from the inside. I am open to relocating to Berlin and would welcome the chance to show you my work.

Kind regards,

Arunabha Majumder
