Novo Nordisk A/S, API MSAT

Application: Advanced Laboratory Technician for PAT Team in API MSAT (345584)

Dear Hiring Manager,

I am applying for the Advanced Laboratory Technician role in the PAT team. I am a mechanical and mechatronics engineer doing my PhD at Aalborg University, with my thesis expected to be finished in March. Most of my best days have been in the lab, setting up equipment, getting sensors to give clean data and finding out why a measurement looks wrong. That is why a hands-on lab role in process analytics appeals to me.

In my PhD I built and ran test setups for a shoulder exoskeleton and a 5-bar robot. I integrated motors, encoders and force sensors, measured the stiffness of the exoskeleton on a physical test setup, and recorded EMG and motion data from 12 participants with the Qualisys data acquisition system. I implemented an Arduino-based trigger system to synchronise the robot's motion with the Qualisys recording, so the data from different systems lined up correctly. I process my data in MATLAB, and in my Master's I implemented a controller in LabVIEW to drive a pneumatic muscle on the lab's test setup. I am used to careful, repeatable work, keeping clear notes and writing reports that others can follow.

I want to be honest that I have not worked with PAT instruments such as spectroscopy, or in a GMP environment yet. I learn new equipment quickly when I can work with it every day, and I would like to grow into this field with your team. I have also taught university courses and supervised students, so I am comfortable explaining methods and supporting colleagues.

Thank you for considering my application. I would be glad to talk more about how I can help the PAT team.

Kind regards,
Arunabha Majumder
