ZEISS Recruiting Team (Kate Benyon, Lara Haslam, Suya Rolph)

Application: Mechanical Design Engineer, R&D

Dear ZEISS Recruiting Team,

I am applying for the Mechanical Design Engineer position in your R&D team. I am finishing my PhD in Mechatronics and Robotics at Aalborg University, and I hold an MTech in Mechatronics and a BTech in Mechanical Engineering. My PhD ends in March.

Most of my work has been designing electromechanical assemblies in SolidWorks and then building and testing them myself. For my PhD I designed a shoulder exoskeleton where a spring carries most of the load and a small motor adds the rest. I made the models and drawings, rebuilt the prototypes many times, integrated the motor, encoder and force sensors, and built the test rigs. When something failed, I worked out why and changed the design. The result cut energy use by more than 25% and won the Best Paper Award at IFToMM ISRM 2026. On a separate robot, I validated a force estimate against a reference sensor to within 10%.

I also enjoy explaining technical work clearly. I have presented at international conferences, taught and supervised students, and I hold a Diploma in Fine Arts, which helps when a design needs a clear sketch or figure.

I have not yet released a product into production, and I would like to build up tolerance stack-ups, thermal analysis, BOM management and DFM in an industrial setting. ZEISS, with its precision instruments, is where I would most like to learn them.

Thank you for considering my application. I would be glad to discuss how I can contribute.

Kind regards,
Arunabha Majumder
