Device Verification Development, Device Development Innovation

Novo Nordisk A/S

Hillerød, Denmark

Application: Test Engineer

Dear Hiring Team,

I am applying for the Test Engineer position in Device Verification Development. I hold an MTech in Mechatronics and a BTech in Mechanical Engineering, and I am finishing my PhD at Aalborg University. Much of my work has been about proving whether a device really meets its targets, through careful test planning, controlled tests and clear conclusions, and I would like to bring that to devices that reach patients.

In my PhD, I planned, coordinated and reported a 12-participant study of a shoulder exoskeleton across three operating modes and two load conditions. I wrote the test and ethics protocols, justified the sample size statistically, set up the EMG and motion-capture instrumentation, and built the data pipeline from raw measurements to conclusions. The results showed a reduction in user muscle effort of more than 15%, and the device design won the Best Paper Award at IFToMM ISRM 2026.

I also care about whether a measurement method can be trusted. On a 5-bar planar parallel robot, I estimated the end-effector force from variable-stiffness actuators through the robot's Jacobian, and validated the method against a reference force sensor to within 10% RMS error. I design my own test rigs, and during my Master's at CSIR-CMERI I built a pneumatic test set-up to characterise actuators and verify a new controller against a classical baseline.

I communicate results to different audiences. I have presented my work in peer-reviewed publications, taught and supervised Bachelor's students, and worked in international teams in Denmark and India in English.

My testing experience comes from research and development rather than a regulated environment, and I have not yet worked with design control, GMP or shelf-life studies. These are exactly what I want to learn, and Novo Nordisk's verification department is where I would most like to build that expertise.

I would welcome the opportunity to discuss how I can contribute to your team. References are available upon request.

Kind regards,

Arunabha Majumder
