mkind, Munich

Robotics Systems Engineer

Hi mkind team,

I'd like to apply for the Robotics Systems Engineer role. You say you welcome junior people who want to grow into more ownership, and that is exactly where I am.

Most of my PhD at Aalborg University was spent building physical things and making them work together. I designed a shoulder exoskeleton with a spring mechanism and a 6 Nm motor, 3D printed the first parts, had the final ones manufactured, and integrated the motor, encoder and force/torque sensors myself. It uses over 25% less motor energy and won the Best Paper Award at ISRM 2026. Not everything worked the first time. My first clutch kept breaking and was hard to make, so I replaced it with a simple bolt-locking one. I learned to keep things simple for the person who has to build and use it, which sounds close to how you think about your cells.

I have also set up data collection with real people. I recorded EMG from 12 participants and arm motion from 6 with Qualisys, and implemented an Arduino trigger so the robot's motion and the recordings stayed in sync. In my Master's I designed the outer PID loop of a pneumatic muscle controller and ran it in LabVIEW. As a student I built an arm exoskeleton, an exo glove, a Go-Kart and a hybrid Efficycle. Outside engineering I paint and do graphic design (Senior Diploma in Fine Arts; Illustrator, Photoshop, Procreate), which helps when I need to explain a design to someone quickly.

I should be upfront: I don't speak German, and I haven't done CE certification or customer-site commissioning yet. I know German is on your list, so I understand if that rules me out. If not, I'm ready to move to Munich, and I can start as soon as possible once the visa is sorted.

Thanks for reading.

Best,
Arunabha Majumder
