Helsing, Design Studio, Munich

Application: Senior Studio Design Engineer

Dear Helsing Design Studio team,

I am applying for the Studio Design Engineer position in Munich. I am finishing my PhD in Mechatronics and Robotics at Aalborg University, and I hold an MTech in Mechatronics, a BTech in Mechanical Engineering and a Diploma in Fine Arts. My PhD ends in March.

The role describes how I like to work: sketch, model, build and test, and stay close to both the CAD and the physical product. For my PhD I designed a shoulder exoskeleton from first hand sketches to a prototype tested with 12 people. I modelled it in SolidWorks, rebuilt the parts with 3D printing between test sessions, and integrated the motor and sensors myself. One key decision was to let a spring carry most of the load, so a small 6 Nm motor was enough. That cut energy use by more than 25%, made the actuator smaller and lighter, and won the Best Paper Award at IFToMM ISRM 2026.

Because I trained in fine arts as well as engineering, I care about how hardware looks and feels to the person using it, and I explain ideas visually. I have presented at international conferences and supervised students.

I want to be honest that I have not yet taken a product into serial production, and the role is senior. If you see a better fit for me in the design studio at a less senior level, I would be glad to be considered for that.

Thank you for your time. I would be happy to walk you through my sketches and prototypes.

Kind regards,
Arunabha Majumder
