Danfoss A/S, Actuator Production, Silkeborg
Attn: Gerd Veierskov, Talent Acquisition Partner

Application: Production Engineer, Actuator Production

Dear Gerd Veierskov and the Actuator Production team,

I am applying for the Production Engineer position in Actuator Production in Silkeborg. I am finishing my PhD in Mechatronics and Robotics at Aalborg University, and I hold an MTech in Mechatronics and a BTech in Mechanical Engineering. My PhD ends in March, and I would like my next step to be close to real production, where improvements show up in quality and uptime.

Much of my PhD was spent keeping hardware running. I built and maintained test rigs for a shoulder exoskeleton, integrated the motor, encoder and force sensors myself, and tracked down faults in mounting, wiring, sensors and logging until the setup gave repeatable results. I validated a force estimate on a 5-bar robot against a reference sensor within 10% error, and I kept clear records so others could repeat the tests. In my Master's I worked with pneumatic valves and pressure sensors, and in my Bachelor's I machined and assembled a rehabilitation exoskeleton in the workshop.

I have not yet worked in a production line, with PLC systems, or with APQP and PFMEA, and I would like to learn these with your team. What I bring is a practical, step-by-step way of solving problems, good documentation habits, and experience explaining technical issues to colleagues and students.

Thank you for considering my application. I would be glad to visit Silkeborg and talk about the role.

Kind regards,
Arunabha Majumder
